ISO 31000 – an introductory workshop

Workshop outline

Risks abound in the modern world. Some are familiar and encountered daily, requiring routine management control, while others are rare or strategic in nature and must be managed by executive management and company directors or others at a governance level.

This half day workshop will introduce you to the 2009 international standard, ISO 31000 *Risk management – Principles and guidelines*, and outline how it can be applied within and across different functions in an organisation. While the workshop will focus on the risk management process set out in the standard it will also touch on the 11 principles for effective risk management and the development of a risk management framework which are also part of the standard.

Two related ISO documents (Guide73: 2009 *Risk management – vocabulary* and ISO 31010: 2009 *Risk Management – Risk Assessment Techniques*) will also be outlined.

Workshop leader

Mr Chris Peace, Principal Consultant, Risk Management Ltd, Wellington New Zealand (also Adjunct Lecturer, Massey University, Wellington, New Zealand). Mr Chris Peace is the Principal Consultant with Risk Management Ltd and a part-time lecturer in risk management and Massey University. At Massey University he is researching the links between corporate governance, risk management and general management. He is also a member of the joint standards committee, OB007, that wrote AS/NZS 4360, subsequently used as the basis for ISO 31000.

He worked as the Risk Manager of the Natural Gas Corporation but has 30 years experience as a risk management consultant in New Zealand and the UK. Chris's clients have included major corporate and public sector organisations.

Chris has an MSc in Risk Management and BSc (Hons) from Aston University in Birmingham.
